Kleros

Purpose: Arbitration

Which Kleros interfaces are used?

Refer: ⊘ nebula/kleros at dev · nebula-org/nebula

Is there a sample implementation ?

Yes, but with GIF V2 and Escrow model

Refer: ⊘ nebula/contracts/nebula at dev · nebula-org/nebula

In this implementation we move money from GIF pool to Escrow and make payout to the parties based on arbitration

New proposed solution: When a claim is raised we would create a dispute and pay the arbitration fees in one single step. Based on arbitration we would invoke GIF handle claim functionality which would make the payout
